3. REQUEST ON OFFERING ELECTIVE COURSES

- If some of you are interested in those elective course(s)* that we are not going to offer in 2018-19, please provide information to your class representatives and send the list to Ms. Yan Wong (yan.wong@cuhk.edu.hk) by 6 Apr 2018 (Friday) before 10:00am:-

Required information
(1) Course code & title
(2) Interested students’ name & SID

*Our department would consider to offer the elective course(s), if the interested students number are ≥ 10.

Class Representatives:-
Yr. 2 – Mr. PANG Cheuk Him (Johnny) & Mr. SHUEN Cheuk Yin (Calvin)
Yr. 3 – Mr. AU Chun Ki (Franklin) & Mr. NG Ka Wai (Kerry)
Yr. 4 or above – Mr. LEE Kit Cheung (Leo) & Mr. LAM Yuk Hong (Jason)
Are you interested in "BMEG4520-Cardiovascular Engineering 心血管工程學" if we offer this course in future?
3. COURSE OFFERING IN 2018-19

Suggestions from students:-

• Although the course “BMEG3130 Tele-Medicine and Mobile Healthcare”, is claimed by other students as "so chur", I think it is still a good course for interested students to take and the course will boost students to learn more in different disciplines, such as Android app development. And I think this course will also teach students to think in a more commercial way (or practical way). Although students may have good ideas, it is also necessary for students to think on the side of product users.

• Can more electives courses be offered in term 1 rather than packing mostly in term 2.
3. COURSE OFFERING IN 2018-19

Course changes for BMEG4330 Sound and Light Waves in Medicine

• Course name changed from “Sound and Light Waves in Medicine” to “Advanced Imaging and Spectroscopy Techniques in Biomedicine”

TAs: TBD

Venue: TBD

Time: TBD

Semester: Term 2, 2018-19

Course website: https://blackboard.cuhk.edu.hk
What will this course cover?

- Introduction to medical imaging and treatment techniques which make use of sound and electromagnetic waves, including ultrasound, laser, and terahertz techniques.
- Ultrasound imaging techniques and applications: sound wave propagation theory (wave equation, transmission and reflection coefficients, and attenuation), sonography design aspects, and medically relevant examples.
- Optical imaging and spectroscopy techniques and applications: optical wave propagation theory, generation and detection methods, microscopy instrument design considerations, principles of data analysis, molecular spectroscopy, and potential medical applications.
- Independent project: design and build biomedical imaging/spectroscopy devices.
**BMEG4330: Advanced Imaging and Spectroscopy Techniques in Biomedicine**

**In this course, we will...**

1. Introduce basic concepts of wave propagation

2. Discuss the use of ultrasound and light for biomedical imaging

3. Watch and perform measurements using biomedical imaging instrument in the labs

4. Design and build your own biomedical imaging/spectroscopy devices

[Image links with alt text: Wave propagation diagrams, ultrasound image, light imaging, and PTC So Lab@MIT]
Optical imaging lab tour

You can image your own red blood cells (RBCs)!

1. Choose an appropriate imaging setting to image your red blood cells (if not scared 😊)

2. Capture the optical images and use MATLAB to calculate the wavefront perturbations due to your red blood cells. This will use your knowledge in Fourier transforms!

3. Convert the wavefront into membrane height. Analyze the height fluctuations and extract RBC stiffness information.

4. Study RBC-related diseases and propose using optical microscopy techniques to target them (e.g., diagnosis and treatment)
Learning outcomes

• Describe the basic physical principles of ultrasound waves and light waves
• Identify the physical principles of major biomedical instruments
• Understand the design principles behind those instruments
• Understand the benefits and limitations of each of the imaging/treatment techniques introduced.
• Understand the safety aspects relevant to each technique
• Design your own biomedical imaging and/or treatment device with specifically targeted applications
• Develop the skills of turning concepts and designs into practices and solve complex engineering problems
• Understand how biomedical technologies can provide positive societal impacts and values
• Have an increased awareness and responsibility of promoting medical technologies to undeveloped countries/regions

4. CLASS ATTENDANCE AND FEEDBACK FROM STUDENTS

• Low class attendance in Term 2, especially:
  - SBMS1432 Human Anatomy and Physiology II
  - SBMS1440 Cell and Molecular Biology in Biomedical Engineering
  - BMEG2300 Circuits and Signals for Biomedical Engineering

• Feedback on BMEG2300 Circuits and Signals for Biomedical Engineering
  - Heavy workload (i.e. 2 mid-terms tests + 4 quizzes)
  - Suggest to upload PPT before the class
  - Lack of reference books information

• Feedback on SBMS1432 Human Anatomy and Physiology II and
  SBMS1440 Cell and Molecular Biology in Biomedical Engineering
  - Too heavy to have 2 SBMS courses in one term
  - Too much contents for both courses
